aminoxy radicals

Compounds having the structure $R_2N–O’ \leftrightarrow R_2N^+–O^-$; they are radicals derived from hydroxylamines by removal of the hydrogen atom from the hydroxy group, and are in many cases isolable. The synonymous terms 'nitroxy radicals' and 'nitroxides' erroneously suggest the presence of a nitro group; their use is not desirable. E.g. (ClCH$_2$)$_2$N–O’ bis(chloromethyl)aminoxy.
