

cationic polymer

Polymer composed of positively charged macromolecules and an equivalent amount of counter-anions.

Notes:

1. If a substantial fraction of constitutional units carries positive charges, then a cationic polymer is a polyelectrolyte.
2. The positive charges may be fixed on groups located in main chains as in an ionene or in pendant groups.
3. The term cationic polymer should not be used to denote a polymer prepared by cationic polymerization.
