sulfimides

1. H$_2$S=NH, sulfimide, and its hydrocarbyl derivatives. They are thus related to sulfoxides in the same way that imines are related to aldehydes or ketones, e.g. (C$_2$H$_5$)$_2$S=NPh $S,S$-diethyl-$N$-phenylsulfimide.

2. A term used in Chemical Abstracts Service Index Nomenclature for sulfonylamines, RN=S(=O)$_2$.
