

star macromolecule

Also contains definitions of: *n*-star macromolecule, regular star macromolecule, variegated star macromolecule

A macromolecule containing a single branch point from which linear chains (arms) emanate.

Notes:

1. A star macromolecule with *n* linear chains (arms) attached to the branch point is termed an *n*-star macromolecule, e.g. five-star macromolecule.
2. If the arms of a star macromolecule are identical with respect to constitution and degree of polymerization, the macromolecule is termed a regular star macromolecule.
3. If different arms of a star macromolecule are composed of different monomeric units, the macromolecule is termed a variegated star macromolecule.
